

Net acceptance summary

Four reportable issues · one open question · cross-tool coverage closed

Modelling decisions are defensible

Structure · geometry · ion identity (Mg^{2+} excluded) · water placement (143 / 146 well-supported) · disulfide bonds.

1SAR refinement is a real and substantial improvement over the deposited starting model.

1 R-free under-stated

≈ 0.012 below 3-tool consensus

Three code paths converge on
R-free ≈ 0.21 .
Success-criterion gap < 0.05
fails.

2 Round 7 ~~Round 6~~

0.213 vs 0.207 at oracle scaling

NCS-torsion-restraints
justification doesn't
reproduce.

3 Asn A 39 outlier

3-tool confirmed

Agent's 0.00% Ramachandran
outliers headline rounds 1
outlier to zero.

4 Peak inventory

5 peaks $> 5\sigma$ not reported

23 + / 8 – peaks at 4σ ; agent
listed 9. Max $+6.18\sigma$.

Open

Open question

K^+ alternative for both ions

Best raw bond-length fit, but coordination number low and the protein is a known Ca^{2+} enzyme.

Needs crystallisation-buffer information.

Closed in this re-issue (2026-05-04)

T13 non-cctbx data-quality oracle wired

ctruncate via scripts/t13_data_quality.py · aimless captured as provenance.

Cross-tool coverage matrix is now fully green — every catalog task in scope
has both cctbx and non-cctbx confirmation.
